

***“KNX the only worldwide standard
for intelligent home and building controls”***

– We’re Taking a stand for Freedom of Choice!

Why Freedom of Choice?

–KNX is an open protocol that seamlessly integrates products and functionality from over 500 manufacturers and will connect and control via gateway to almost any mechanical or electrical product you want to specify as part of an intelligent building project.

Established over 30 years ago KNX was designed from the outset to be backwards compatible. This means that whether you have a brand new KNX core installation or one that was installed back in the 90's you can continue to adapt, add to and change the functionality of your system without a complete re-install.

This makes KNX the most:

- **sustainable choice**
- **flexible choice**
- **cost effective choice – in the WORLD**

...for integrating any BMS with intelligent, integrated functionality that can adapt and evolve with the changing needs of building users and advancing technological developments. It is future-proofed by design and provides incredible high-end functionality for residential and commercial applications.

In the following pages you will find links to Integrators who will design and install your core system and integrate all the current systems and functionality you want to include in your project. You will also find links to product specifications and examples of projects our members have.

*KNX is **NOT** a product range or a proprietary system, it is **the open protocol** that should be the core of all intelligent building controls as we build a more sustainable, responsible and energy efficient future.*

Find a KNX Integrator

Our Integrators design and install integrated building management systems based on the KNX protocol, for domestic and commercial projects. All are certified KNX Partners and all adhere to the KNX UK code of conduct for added peace of mind. Click on their logos below to find out more about each one.

All will design and install a bespoke future-proof BMS for your Commercial or Residential controls system. Simply contact one or two to discuss your needs.

[Follow this link to see all KNX UK Integrators \(Design & Installation\)](#)

There are also opportunities to view the vast range of products and functionality in operation – see our [Showrooms page](#).

View and source KNX Products

There are over 8,000 products directly compatible with the KNX open protocol from over 500 manufacturers globally. KNX UK is grateful to the following International Brands for their ongoing support in the work we do in the UK.

And also, our UK Distributor Members

You can find our members' products page on our website [here](#)

Request a virtual meeting with a KNX Expert

Would you like to just talk to someone to find out how KNX can provide solutions for the specific project you are working on?

We can help with that – [simply fill out this form](#) and we will put you in touch with one of our experts.

We have experts in:

- Energy Efficiency
- Residential – new build, refurbishment, housing developments
- Commercial - public buildings, hospitality, education
- MDU's
- Assistive Living Applications

Find out how to Integrate:

- HVAC
- AV
- Home Cinemas
- Public address systems
- Sun Tracking
- Zone settings
- Occupancy
- Energy Efficiency
- WiFi Access and Content control by zone, user or time of day

...and so much more,

[Fill out the form and find out more today.](#)

View Projects using the KNX open protocol

KNX is NOT a proprietary solution it is open source – used around the world to manage large scale commercial, residential, educational, hospitality and medical facilities.

When we speak of KNX, we are not speaking of one solution or product, but thousands of control solutions with freedom of choice and future-proofing built in from day one.

If you want to know more about how this technology improves not just building life, but the lives of all those who work and live in those buildings, browse our [members' projects](#).

Book a CPD for your colleagues

Now you know how vast, adaptable and future-proof building a BMS on a core KNX installation can be, you might want to share this with your colleagues.

We have members who are trained in delivering CIBSE approved CPD sessions and many of our manufacturing members also provide product specific training.

We are happy to arrange CPD sessions, online, at your offices or at one of our member's locations to suit you.

Please email admin@knxuk.org to book CPD's for your team.

Join KNX UK

Using KNX as a core system to integrate entire BMS in large and small projects is sustainable, energy efficient & future-proofed

Join us and add your voice to educate the UK construction industry in the very real benefits of this technology and its potential to positively impact the challenges we face in the years to come.

We offer Associate membership for manufacturers of peripheral products, electricians, contractors, developers, building services consultants,, occupational therapists & interested individuals from just £100 per year

For those who are already involved in intelligent building systems, from Integration to manufacture we offer competitive subscriptions and wide-ranging benefits.

[Find out more here](#) – we look forward to welcoming you.
